TISSUE SPECIFICITY: Expressed in highest levels in the epididymis vas deferens, brain, thymus, and ovary and the lowest in the submandibular gland.

DISEASE: Defects in CST3 are a cause of hereditary cerebral hemorrhage with amyloidosis (HCHWA) [MIM:105150]; also known as cerebral amyloid angiopathy (CAA) or cerebroarterial amyloidosis Icelandic type. HCHWA is characterized by a thickening of the cerebral arteries walls with deposition of material with the characteristics of amyloid.

The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I). (I) is useful for: inhibiting cancer procoagulant protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large

spermatogenesis, and inhibiting cancer procoagulant protei to inhibition of thrombotic events associated with cancer.

quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic peptide of human cystatin-8 (Zcys8) 59 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                      of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polymucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 oligonucleotide probes are useful for in vivo diagnosis. The polymucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I). (I) is useful for: inhibiting cancer procoagulant protein in an individual and thus inhibiting the thrombotic events
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cystatin-8; Zcys8; cancer; procoagulant protein; thrombosis; spermatogenesis; seminal fluid viscosity; cryopreserved sperm; sperm motility; fertilisation; antigenic fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-SEP-2000; 2000US-0230230P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-AUG-2001; 2001WO-US026868
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO200220567-A2

                                                                             cc polypeptide (I). (I) is useful for: inhibiting cancer procoagulant cc protein in an individual and thus inhibiting the thrombotic events cassociated with cancer; promoting spermatogenesis, modulating seminal cc fluid viscosity, enhancing viability of cryopreserved sperm, sperm cantibodies. Zcys8 is useful as research reagent for characterising cc antibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in cc enhancing fertilisation during assisted reproduction in humans and in cc animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the cresence of Zcys8. The antibodies are also useful to isolate large cc quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. Cc The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 genes. Cc polynucleotide encoding (I) is useful to detect and to localise the cc polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and crearrangements and genetic alterations that inactivate the Zcys8 gene. This is the amino acid semence of human coaterations are compared to the coaterations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    문

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                    associated with cancer; promoting sparmatogenesis, modulating seminal fillid viscosity, enhancing viability of cryopreserved sperm, sperm compility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in canhancing fertilisation during assisted reproduction in humans and in canhancing fertilisation during assisted reproduction in humans and in canhancing fertilisation and the production in humans and in the presence of Zcys8. The antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 genes. Coligonucleotide probes are useful for in vivo diagnosis. The polynucleotide probes are useful for in vivo diagnosis. The composines contain a mutation in the Zcys8 gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene.

This sequence represents an antigenic peptide of human cystatin-8 (Zcys8)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                    fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sites of interaction between Zcys8 and its receptor. Zcys8 is useful in enhancing fertilisation during assisted reproduction in humans and in animals. Anti-(I) antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of Zcys8. The antibodies are also useful to isolate large quantities of Zcys8 protein and DNA sequences that encode Zcys8 genes. The polynucleotide encoding (I) is useful to detect and to localise the expression of a Zcys8 gene in a biological sample and Zcys8 oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding (I) is useful in determining whether a subject's chromosomes contain a mutation in the Zcys8 gene line for the gene in a station in the Zcys8 gene line for the contain a mutation in the Zcys8 gene line for the contain and zcys8 gene line for the zcy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
Sequence 52
                                                                                        copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the Zcys8 gene. This sequence represents an antigenic peptide of human cystatin-8 (Zcys8)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide (I).

ZcysB is useful in enhancing ferrilisation during assisted reproduction in humans and in animals. Anti-[1] antibodies are useful to screen biological samples like blood, urine, saliva, tissue biopsy and autopsy material in vitro for the presence of ZcysB. The antibodies are also useful to isolate large quantities of ZcysB protein and DNA sequences that encode ZcysB genes. The polynucleotide encoding [1] is useful to detect and to localise the expression of a ZcysB gene in a biological sample and ZcysB oligonucleotide probes are useful for in vivo diagnosis. The polynucleotide encoding [1] is useful in determining whether a subject's chromosomes contain a mutation in the ZcysB gene like aneuploidy, gene copy number changes, insertions, deletions, restriction site changes and rearrangements and genetic alterations that inactivate the ZcysB gene.

This sequence represents an antigenic peptide of human cystatin-8 (ZcysB)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention describes an isolated mammalian cystatin-8 (Zcys8) polypeptide (I). (I) is useful for: inhibiting cancer procoagulant protein in an individual and thus inhibiting the thrombotic events associated with cancer; promoting spermatogenesis, modulating seminal fluid viscosity, enhancing viability of cryopreserved sperm, sperm motility and fertilisation; and as antigenic peptides to generate antibodies. Zcys8 is useful as research reagent for characterising sit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel isolated mammalian cystatin-8 polypeptide useful for promoting spermatogenesis, and inhibiting cancer procoagulant protein which leads to inhibition of thrombotic events associated with cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

The invention describes an isolated mammalian cystatin-8 (Zcys8)
CC polypeptide (I). (I) is useful for: inhibiting cancer procoagulant
CC protein in an individual and thus inhibiting the thrombotic events
CC associated with cancer; promoting spermatogenesis, modulating seminal
CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm
CC motility and fertilisation; and as antigenic peptides to generate
CC antibodies. Zcys8 is useful as research reagent for characterising sites
CC of interaction between Zcys8 and its receptor. Zcys8 is useful in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in humans and in
CC enhancing fertilisation during assisted reproduction in the cys8 enes.
CC prospuncleotide encoding (I) is useful to detect and to localise the
CC polynucleotide probes are useful for in vito diagnosis. The
CC polynucleotide probes are useful for in vito diagnosis.
CC copy number changes, insertions, deletions, restriction site changes and
CC copy number changes, insertions, deletions restriction site changes and
CC rearrangements and genetic alterations that inactivate the Zcys8 gene.
CC This sequence represents an antigenic peptide of human cystatin-8 (Zcys8)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cystatin-8; Zcys8; cancer; procoagulant protein; thrombosis; spermatogenesis; seminal fluid viscosity; cryopreserved sperm; sperm motility; fertilisation; antigenic peptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC polypeptide (I). (I) is useful for: inhibiting cancer proceedulant CC protein in an individual and thus inhibiting that thrombotic events CC associated with cancer; promoting spermatogenesis, modulating seminal CC fluid viscosity, enhancing viability of cryopreserved sperm, sperm CC motility and fertilisation; and as antigenic peptides to generate CC antibodies. Zoy88 is useful as research reagent for characterising sites CC of interaction between Zoy88 and its receptor. Zoy88 is useful in CC enhancing fertilisation during assisted reproduction in humans and in CC enhancing fertilisation during assisted reproduction in humans and in CC enhancing fertilisation during assisted reproduction in humans and in CC enhancing fertilisation seed bloops and sutopsy material in vitro for the CC presence of Zoy88. The antibodies are also useful to isolate large CC quantities of Zoy88 protein and DNA sequences that encode Zoy88 genes. CC The polymucleotide encoding (I) is useful to detect and to localise the coplymucleotide probes are useful for in vivo diagnosis. The CC chromosomes contain a mutation in the Zoy88 gene like aneuploidy, gene CC copy number changes, insertions, deletions, restriction site changes and carrangements and genetic alterations that inactivate the Zoy88 gene. CC This sequence represents an antigenic peptide of human cystatin-8 (Zoy88)
                                                                                                                                                                                                                                                                                                                                                            Query Match

The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent compound that is differentially expressed in neuronal tissue of a first animal cc subjected to pain, a method for identifying an agent compound that regulates the expression of the polynucleotide sequence the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the specification, a method for identifying a pharmaceutical composition, a compound useful in treating pain and a pharmaceutical composition comprising the one or more compound that regulates the activity is useful for preparing a medicament for treating compound telegration, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more compound that composition comprising the one or more compound that composition comprising the one or more compound that segmental nerve injury (chung), chronic construction computed that compound that co

                                                                                                                                                                                                                                                                                           CC kit to perform the method, an array, a method for identifying an agent CC that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC that is differentially expressed in neuronal tissue of a first animal CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the CC polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the CC expression, a method for identifying a compound useful in treating CC polypeptides or their antibodies. The polynucleotide or the compound that CC polypeptides or their antibodies. The polynucleotide or the compound that CC modulates its activity is useful for preparing a medicament for treating CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene CC therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:
                                                                                                                                          Query Match

Cystatin T is testis specific and is homologous to cystatin-related epididymal specific gene (CRES) and type 2 cystatins. Cystatins inhibit cysteine proteinases and are found with male reproductive tissues and secretions. Cystatin T sequence is useful for modulating spermatogenesis and studying, diagnosing and treating reproductive disorders. The present sequence is murine cystatin-related

The cystatin T polymucleotide is useful in gene therapy applications, where it is desired to increase or inhibit cystatin T activity. It is also useful for producing cystatin T polymeptide, as well as for detecting the expression of a cystatin T gene in a biological sample. The cystatin T is useful for modulating spermatogenesis, and may be used to study or modulate that function in in vitro or in vivo systems. In particular, it is also useful for enhancing sperm production, increasing the number of viable sperm in a sample, or enhancing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B B

GENERAL INFORMATION:

```
Sequence 10, Application US/09941314

Patent No. US20020142396A1

GENERAL INFORMATION:
APPLICANT: ZymoGenetics, Inc.
TITLE OF INVENTION: Mammalian Cystatin-8 and Its Use
TITLE OF INVENTION: Inhibit Cancer Procoagulant Pro
FILE REFERENCE: 00-81PC

CURRENT PILICATION NUMBER: US/09/941,314

CURRENT PILING DATE: 2001-08-29

PRIOR APPLICATION NUMBER: 60/230,230

PRIOR FILING DATE: 2001-09-01

NUMBER OF SEQ ID NOS: 19

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 10

LENGTH: 46
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 12, Application US/09941314

Sequence 13, Application US/09941314

Patent No. US20020142396A1

GENERAL INFORMATION:

APPLICANT: ZymoGenetics, Inc.

TITLE OF INVENTION: Mammalian Cystatin-8 and Its Use to TITLE OF INVENTION: Inhibit Cancer Procoagulant Protein FILE REFERENCE: 00-81PC

CURRENT APPLICATION NUMBER: US/09/941,314

CURRENT FILING DATE: 2001-08-29

PRIOR APPLICATION NUMBER: 60/230,230

PRIOR FILING DATE: 2001-09-01

NUMBER OF SEQ ID NOS: 19

SOFTWARE: FastSEQ for Windows Version 4.0

TYPE: PRT

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
